

ATTENTION JCK 2008 EXHIBITORS

Welcome, and thank you for exhibiting at JCK Las Vegas.

We would like to remind you about the Blue Box electrical outlet system provided in your exhibit. Below is a brief explanation of how the Blue Box works and how much power it provides.

There is one Blue Box per designated exhibitor 10'x10'. Each box has a 10 amp/1,000 watt fuse. If the device(s) plugged in exceeds 10 amps/1000 watts, unless the exhibitor has ordered additional power, the fuse blows at that specific box; preventing a surge back to the line supplying the power. This prevents other booths that are sharing the same circuit from being impacted adversely with a power outage. On the other hand, if a booth is more than 10'x10' and has multiple blue boxes, care should be taken to be sure that one box does not get overloaded and the power is spread between the outlets. If your booth is a 10'x30' for example you will have 3 of the blue boxes and should take care to spread your power connections between them so that you do not overload any particular one.

JCK Show management wants to limit power interruptions to exhibits. In the event an exhibitor blows a fuse, SES will provide a replacement fuse or the exhibitor will have the option of ordering additional power at that time.

To ensure that companies do not continually exceed the power limits of the blue box, JCK Show Management will enforce the following service fees for blown fuses:

- The first time a fuse is blown it will be replaced free of charge.
- If an exhibitor requires a second fuse they will be given the option to order additional power at the service desk, or be charged a 1 hour labor fee to replace the original fuse.
- Any exhibitor who blows a third fuse could be shut down for the duration of the show and the exhibitor will not eligible for any refunds on their exhibit space fees or exhibit services.

In case of a blown fuse, please report it to the SES Service Desk located in the Sands Lower Lobby across from Meeting Room #101. CTS Electrical will then be dispatched to your exhibit booth with a replacement. For any questions regarding Electrical please call our Order Processing Center at 702-733-5070.

We hope you understand that we want both you and your neighboring exhibitors to have a great show. Thank you for your cooperation and we wish you a successful event!
